

# hAP ax<sup>2</sup>

The next generation of home access point perfection.

Futuristic design. Classic value.

POWERFUL  
QUAD-CORE ARM CPU

802.11AX + WAVE2

STRONG DUAL-BAND,  
DUAL-CHAIN WIRELESS  
(4-4.5 DBI)

5X GIGABIT ETHERNET  
PORTS

POE-OUT

DIFFERENT MOUNTING  
OPTIONS

WPA3

## THE SMALLEST FULLY-FLEDGED AX ROUTER ON THE MARKET!

Like the previous models, hAP ax<sup>2</sup> can be mounted vertically, horizontally, or even on the wall – without sacrificing the strong signal.

We did our best to create the smallest dual-band AX router on the market. Enjoy next-level connectivity without giant, obtrusive devices that take up way too much space!

SICE DISTRIBUTORE UFFICIALE: [www.sicetelecom.it](http://www.sicetelecom.it)

It's time to supercharge your home network with the Generation 6 wireless network and our latest addition to the beloved hAP series. hAP ax<sup>2</sup> has everything you might need in a primary home access point – and more! Forget endless reviews and comparisons – this is the perfect device for 99% of homes.

**Wireless signal is now stronger than ever.** Here are the two main ingredients of hAP ax's success: a state-of-the-art dual-band, dual-chain 4-4.5 dBi radio, and the 802.11ax standard with Wave2 support. Let's compare it to the previous generation: depending on your overall setup, that means up to 40% higher speed in the 5 GHz and up to 90% higher speed in the 2.4 GHz spectrum!

Some might ask – why do we even need higher wireless speeds? Well, countless use cases have been previously impossible or difficult to pull off. For example, working with large media files over the wireless network – without the need to download and upload everything. Do you really have the time to wait? Grab a hAP ax<sup>2</sup> and save more time for the essential things in life!

The wireless interface supports 802.11ax and is backward compatible with older wireless standards. Older client devices that only support 802.11ac will still benefit from multiple additional 802.11ac Wave 2 features, such as MU-MIMO and explicit beamforming.

The modern quad-core CPU running at 864 MHz combined with a solid GB of RAM packs a hefty punch when it comes to heavy operations like **complex firewall rules, IPsec hardware encryption, using more threads** or experimenting with the most advanced RouterOS features. And with the addition of WPA3 advanced encryption support, you're safer than ever before.

Like the previous models, **hAP ax<sup>2</sup>** can be mounted vertically, horizontally, or even on the wall – without sacrificing the strong signal!

With so many products and features on the market, even an experienced user can become confused. So it's time for a **simple truth for a simple choice**: you can't go wrong with a **hAP ax<sup>2</sup>** in most homes.

## • Specifications
