

Certified User Management Engineer (MTCUME)

Training outline

Duration: 2 days

Outcomes: By the end of this training session, the student will be able to securely manage large scale RouterOS based network with centralized user management.

Target Audience: Network engineers and technicians wanting to deploy and support large scale corporate networks.

Course prerequisites: MTCNA certificate

| Title | Objective |
|-------------------------------|---|
| Module 1 PPP | <ul style="list-style-type: none"> • PPP Profile <ul style="list-style-type: none"> • Local and remote addresses • Incoming and outgoing filters • Address list • Change TCP-MSS • Use encryption • Session timeout • Rate-limit configuration • Only-one setting • PPP Secret <ul style="list-style-type: none"> • Service and Profile • Local and Remote address • Routes configuration • Limit Bytes In/Limit Bytes Out configuration • IP Pool <ul style="list-style-type: none"> • Set addresses ranges • Next pool options • Module 1 laboratory |
| Module 2 PPTP, L2TP | <ul style="list-style-type: none"> • PPTP and L2TP <ul style="list-style-type: none"> • Theory • Comparison • PPTP Client configuration <ul style="list-style-type: none"> • Client setup • Set profile • Dial on demand • Add default route and static routes • PPTP Server configuration <ul style="list-style-type: none"> • Enable server • Setup profiles • Add clients to PPP secret • Set static interfaces for clients • L2TP Client configuration <ul style="list-style-type: none"> • Client setup • Configure profile • Dial on demand • Add default route and static routes • L2TP Server configuration <ul style="list-style-type: none"> • Enable server • Set profiles • Add clients to PPP secret • Set Static interfaces for clients • Module 2 laboratory |
| Module 3 PPPoE | <ul style="list-style-type: none"> • PPPoE server and client <ul style="list-style-type: none"> • Theory • Usage environment • Comparison to other PPP protocols |

| | |
|-----------------------------|---|
| | <ul style="list-style-type: none"> • PPPoE client configuration <ul style="list-style-type: none"> • Client setup • Select interface • Service name • Configure profile • PPPoE Server configuration <ul style="list-style-type: none"> • Enable PPPoE server • Set profiles • Add clients to PPP secret • Add Static interfaces for clients • Secure server by removing any IP address from PPPoE server interface • Encryption <ul style="list-style-type: none"> • Set profile without encryption • Set profile with encryption • Configure PPPoE client without encryption • Interface ECMP <ul style="list-style-type: none"> • Set ECMP routes for PPP interfaces • Module 3 laboratory |
| Module 4 Bridging | <ul style="list-style-type: none"> • L2TP and EoIP <ul style="list-style-type: none"> • Set L2TP tunnel • Set EoIP tunnel • Create bridge and add necessary interfaces to ports • Confirm you have Ethernet connectivity between remote nodes • L2TP and VPLS <ul style="list-style-type: none"> • Set L2TP tunnel • Set VPLS tunnel • Create bridge and add necessary interfaces to ports • L2TP and BCP <ul style="list-style-type: none"> • Set L2TP tunnel • Use BCP to bridge PPP interface • Add to bridge necessary interface • Multilink Protocol <ul style="list-style-type: none"> • Enable multilink by specifying correct MRRU settings • Disable mangle rules for MSS adjustment • MLPPP (optional) <ul style="list-style-type: none"> • Setup client and specify multiple interfaces for one client • Set PPPoE server with MLPPP support • Module 4 laboratory |

| | |
|--------------------------|--|
| Module 5 IPsec | <ul style="list-style-type: none">• Introduction<ul style="list-style-type: none">• Theory and concepts• Comparison to other VPN protocols• IPsec Peer<ul style="list-style-type: none">• Use different authentication methods• IPsec exchange modes• Encryption and hash algorithms• NAT-Traversal• Lifetime and lifebytes• DPD protocol• Policy<ul style="list-style-type: none">• IPsec protocol and action• Tunnels• Generate dynamic Policy• Proposal<ul style="list-style-type: none">• Encryption and authentication algorithms• Lifetime• PFS• Installed-SA<ul style="list-style-type: none">• Flush SA• Create IPsec between two routers with NAT<ul style="list-style-type: none">• Set peer• Set policy• Set NAT rules• Confirm the secure link is established• Module 5 laboratory |
|--------------------------|--|

| | |
|----------------------------|--|
| Module 6 HotSpot | <ul style="list-style-type: none"> • Introduction <ul style="list-style-type: none"> • Concepts • Usage environments • Setup HotSpot with default settings • HotSpot Login Methods <ul style="list-style-type: none"> • HTTP CHAP/PAP • MAC • Cookie • HTTPS • Trial • RADIUS • Users <ul style="list-style-type: none"> • Add users • Set MAC-address for user • Set MAC-address for username • Limit Uptime and Limit Bytes In/Out • Reset limits for user • Monitor Users <ul style="list-style-type: none"> • Host Table • Active Table • SNMP for users • Profile <ul style="list-style-type: none"> • Keepalive timeout • Shared users • Rate-Limit • Address-list • Incoming/Outgoing filter • Incoming/Outgoing Packet Mark • Bypass HotSpot <ul style="list-style-type: none"> • Walled garden • Walled garden IP • IP binding • Customize HotSpot <ul style="list-style-type: none"> • Advertisement • Customize pages • Module 6 laboratory |
|----------------------------|--|

| | |
|---------------------------|---|
| Module 7 RADIUS | <ul style="list-style-type: none">• RADIUS client<ul style="list-style-type: none">• Add radius client• Set service• Use RADIUS for the specific service• RADIUS server• User manager<ul style="list-style-type: none">• Install the latest user-manager• Add routers• Add users• Set profile• RADIUS incoming• Module 7 laboratory |
|---------------------------|---|
