- Branded Login Page
- Social Login
- Microsoft Azure login
- PMS Integration
- Fair Traffic Shaping
- Built-in Payment Gateways
- Vouchers
- Advertising and Remarketing
- Heat Maps
- GPS Tracking
- Client Surveys and Quizzes

Developed for ISPs and WISPs

The flexible solution to manage one network or a thousand networks from a single platform. You can shape Network Station to suit your and your client's needs. It can be entirely white-labelled and self-hosted. The license is scalable with unlimited users and charged on a per-network basis.

Reassuringly robust

With 28,000 venues using Network Station, it is one of the highest platforms available.
Offer your clients peace of mind with compliance, personalisation and security. And profit from it, too.
Licences are charged on a per-network basis.
Scalable, with unlimited users and APs

Highly secure, highly reliable

Network Station is dedicated to maintaining the utmost standards in security, privacy, and reliability, adhering to the regulations set forth by various countries and regions. The European Union's General Data Protection Regulation (GDPR) safeguards the fundamental right to privacy and personal data protection for European Union data subjects. Additionally, Network Station extends its commitment to include other countries like South Africa, each with their own privacy policies.

Family DNS

Network Station, with features like daily updated blacklists, customisable website controls, and comprehensive dashboard monitoring, you have full control over your network's browsing experience.
Family DNS on board. Whether you're navigating high-latency environments like cruises or enhancing productivity in offices and schools, Family DNS is your go-to tool.

White Label Solution

Network Station offers a White Label solution for our partners who would prefer to **re-sell the Network Station portal under their own brand**. An all-encompassing powerful solution to manage one network or a thousand networks, identifying and enhancing your business.

Characteristics

Platform

Operating System	AlmaLinux Based
Syslog Server	Integrated
Radius Server	Integrated

Daily data and time allowance	☑
Weekly data and time allowance	☑
Monthly data and time allowance	☑
Bandwidth allowance download + download	☑
Bandwidth modulation	☑
Limit the number of devices	☑
Limit the number of connections	☑
Freemium plans	☑

Turn your WiFi into business

Advertising enables you to promote to millions of people and grow your business with advertising across devices, where people enjoy their WiFi connection.

Targeted Advertising

WiFi networks allow for precise targeting based on user data such as age, gender, and location. This targeted approach maximises engagement and conversion rates, ultimately optimising return on investment for advertisers.

Engagement

With many people accessing WiFi networks daily, advertising on these platforms ensures heightened brand visibility and a unique avenue for meaningful user engagement. Through interactive advertisements, surveys, or promotions, advertisers can tailor experiences that resonate with users and drive action. Make your brand remain top of mind.
